The images in Earth at Night were taken by the Suomi National Polar-orbiting Partnership (NPP) satellite, which orbits Earth 14 times a day. The satellite's Visible Infrared Imaging Radiometer Suite (VIIRS) instrument captures images of the Earth's surface in visible and infrared light. This allows scientists to see the Earth's surface at night, even in areas where there is no moonlight.

The images in Earth at Night are a testament to the beauty of our planet. They show us the Earth's cities, towns, and villages as they sparkle in the darkness. They also show us the Earth's natural wonders, such as

volcanoes, auroras, and wildfires. These images are a reminder that even in the darkest of times, there is always beauty to be found.

The Cities

The images of cities at night are some of the most striking in the book. They show the density of human population on our planet, and the way that our cities are connected to each other. The lights of cities can be seen from space for hundreds of miles, and they create a beautiful tapestry of light against the darkness of the Earth.

The Natural Wonders

The images of natural wonders at night are also breathtaking. They show us the power and beauty of the Earth's natural forces. The glowing lava of

volcanoes is a reminder of the Earth's inner heat, and the auroras are a reminder of the Earth's magnetic field. These images are a testament to the diversity and beauty of our planet.

The Message of Earth at Night

The images in Earth at Night are a reminder that our planet is a beautiful and fragile place. They show us the impact that humans are having on the Earth, and they also show us the beauty that is still left to be discovered. These images are a call to action, to protect our planet and to preserve its beauty for future generations.

Earth at Night is a stunning book that will open your eyes to the beauty of our planet. It is a book that will inspire you to protect our planet and to preserve its beauty for future generations.
